# Report Description

Infrastructure for hybrid and multiple clouds is being used more and more. Multi-Cloud is customizable and flexible in the sense that an organization can "choose the best" of each cloud type to fit their specific business requirements, economics, locations, and timing. To update outdated apps and add features such as support for mobile devices, social platform integration, and business data management, some iPaaS providers offer tailored development kits. Although IT departments are capable of managing integration on their own, there are times when it is more efficient and cost-effective to contract with an outside iPaaS vendor.
